AG-2493 API Configuration Change for Travel Insured International

User Group: All User Groups/User Facing

Summary: There was a change within the *Travel Insured International* API configuration to allow quoting and selling of *Travel Insured International* policies through AgentMate for trips valued at $10,000 USD and higher.

Previously, trips over $10,000 USD were returning an error when the user attempted to quote/book *Travel Insured International* policies.

The change will now vet ALL *Travel Insured International* insurance plans against total trip cost and only present applicable policies as available to sell/quote when using the integration in AgentMate.
